REMARKS:

This brochure shows the information known at the time of printing. It does not constitute a binding document under any circumstances. Despite the care taken in preparing this document, printing errors may still occur. We reserve the right to modify fittings and improve products in the current year's models without prior notice. Some vehicles are shown with special or optional features which are listed in the corresponding price lists and available at an additional cost.

Style items and decorations used to embellish the visual presentation of this catalogue are not included in the actual vehicle nor in the delivery service.

The available payload is the difference between the Maximum Technically Permissible Laden Mass (MTPLM) and the Mass in Running Order (MRO). These include the driver's weight (75 kg), 20 litres of fresh water, 90% fuel and 100% gas. They only take into account standard factory-installed fittings. A +/- 5% tolerance for the mass in running order is permitted under European regulations. The manufacturer reserves the right to modify it. The fresh water tank capacity value used for calculating the mass in running order is 20 litres. This corresponds to the regulations and the number of driving seats set during the certification process. Users are responsible for adapting their load and number of onboard passengers according to their vehicle's payload, in compliance with the Maximum Authorised Mass and axle weights. Users may choose to reduce their load or number of passengers in order to increase their fresh water capacity above this value. The maximum fresh water capacity is stated for each vehicle in the 'Autonomy' paragraph.

Important: installed optional fittings and accessories are not included in the motorhome's MRO. Consequently, they will systematically reduce the available payload and potentially reduce the number of driving seats.

Contact your dealer, who will be happy to provide you with an accurate definition of the models available in each country. Before submitting your order, please contact a dealer for information about the current product and collection status.

Information about the vehicle's delivery, appearance, performance, dimensions and mass correspond to the information known at the time of printing. Those details and tolerances comply with European regulations (EU 1230/2012), however they are subject to change up until the time of vehicle purchase or delivery.

The manufacturer is committed to delivering a vehicle whose MRO sits within the tolerance threshold of the MRO set during the certification process.

The maximum tow weight is a chassis limit related to the vehicle's certification. Depending on the coupling attached to the vehicle and the specific values stated by the coupling manufacturer, the maximum weight that the vehicle can tow on the trailer may be lower. The coupling resistance specifications (in particular values D and S) are engraved on a plaque attached to it. The D value helps determine the maximum authorised mass for towing using the following calculation: $MR = D \times T / [(9.8 \times T) - D]$, where: MR = maximum possible mass of the trailer (tonnes); T = Maximum Authorised Mass (MAM) of the vehicle (tonnes); D = value (kN) shown on the coupling. Example: If D = 11.3 kN and T = 3.5 T, the maximum trailer mass (MR) would be: $MR = (11.3 \times 3.5) / [(9.8 \times 3.5) - 11.3] = 1.72 T$ (or 1,720 kg). Giving the vehicle's maximum towable mass (up to 2.5 T).
